Student Management System

Student Management System

A Java-Based Academic Management
Application

Technologies:

Java • Swing • MySQL • JDBC

PROJECT OVERVIEW

What is our project?

- A system for managing **student and academic records**
- Replaces manual record keeping
- Stores information in a **centralized database**
- Provides an easy-to-use **GUI**
- Allows administrators to manage academic information efficiently

MAIN FEATURES

Key Features

- **Login & Authentication**
- **Student Management**
- **Course & Subject Management**
- **Marks Management**
- **Attendance Management**
- **Result Management**
- **Student Profile / Dashboard**

STUDENT & ACADEMIC MANAGEMENT

Student Management

- Add, view, search, update & delete students
- Manage student information

Academic Management

- Manage courses and subjects
- Record marks and attendance
- Manage and view student results

**Student → Course → Subject → Marks / Attendance →
Result**

CONCEPTS USED

Programming & Database Concepts

- Object-Oriented Programming (OOP)

- Classes & Objects
- Encapsulation
- Inheritance
- Polymorphism

- CRUD Operations

- Create
- Read
- Update
- Delete

- Database Management

- Tables
- Primary Keys
- Foreign Keys
- Relationships

SYSTEM ARCHITECTURE

How Our System Works

User

Java Swing GUI

DAO / Model Classes

JDBC Connection

MySQL Database

Technologies

Java + Swing + JDBC + MySQL

CONCLUSION

- Provides a centralized student management system
- Simplifies student and academic record management
- Demonstrates practical use of Java, OOP, GUI, JDBC & MySQL
- Makes academic information organized and easily accessible

THANK YOU
